Burndown Chart

Sprint Burndown — Nov 04, 2025 - Nov, 17 2025

Legend: Burndown today so far · Actual Burndown · Ideal Burndown

Comments:

NOTE → Burndown Chart Power-up was used, it is not the greatest but provides us with a decent chart for us to reflect on.

- Our chart shows that our progress for completing tasks has been slow until the Friday November 14th, due to our tasks being underestimated in complexity, along with a minor blocker of setting up our DB for each of us to work correctly.
- Afterwards, our tasks were re-estimated, and a couple new tasks were added (note: we had to fix our Trello setup, and re-organize how we perform our tasks on the board).
- Lastly, our progress had been made in order to cut down on the cards remaining.
- Our remaining cards, the algorithm to organize tasks and additional calendar-based features remain, which we plan to carry forward to sprint 3.
- Overall, we have successfully completed our entire app, and now we must focus on the functionality of algorithms, calendars, and general UI improvements.
- We must also improve our pacing and task estimation/complexity identification in order to meet an ideal burndown pace.
